

EDUCATION

B.Tech, Computer Science, *Symbiosis Institute of Technology*

2019 – 2023 GPA: 7.64/10

SKILLS

Core CS	Data Structures & Algorithms, Operating Systems, Networking, Database Systems
Programming Languages	Python, Swift, JavaScript, Java, Objective-C
Frameworks & Platforms	React, Node.js, RESTful APIs, Firebase, Solidity
Cloud & DevOps	Google Cloud Platform (GCP), Docker, Ngrok, Bash Scripting, CI/CD Pipelines (GitLab Runner)
Developer Tools	Git, Postman, Xcode, VSCode, JIRA, Agile/Scrum

TECHNICAL EXPERIENCE

Product Engineer

Promobi Technologies

Jun 2023 — Present

Pune, India

- Contributed to the development of **macOS and iOS** clients for **Scalefusion**, an enterprise **MDM** platform used to manage and secure large device fleets.
- Delivered key security and device control features for **Veltar**, enabling organizations to manage application access and peripheral usage across managed devices.
- Built internal **Python-based scripts** to validate macOS and iOS devices against defined compliance baselines.
- Designed user-facing **authentication** and access workflows for **OneID**, including custom login experiences and configurable access restrictions and policies.
- Developed and maintained a **remote access** capability to securely connect to managed macOS devices for support and troubleshooting.
- Improved development efficiency by **modularizing shared components** and introducing standardized build and release workflows.
- Implemented and maintained **CI/CD pipelines** to streamline builds, testing, and releases for macOS and iOS applications.

Product Engineer Intern

Promobi Technologies

Jan 2023 — Jun 2023

Pune, India

- Delivered **BrewAssets**, an end-to-end device inventory and tracking system, within a **3-month timeline**.
- Developed **cross-platform utilities** to collect and aggregate system metrics such as user activity, battery, network, storage, and hardware information.
- Built a **lightweight client applications** to manage inventory data and streamline device onboarding.
- Integrated a centralized reporting dashboard to **visualize and export structured data**, reducing manual reporting overhead.

PROJECTS

Secure Voting Website Using Ethereum and Smart Contracts

- Designed and implemented a **blockchain-based e-voting system** using **Ethereum smart contracts**, focusing on secure vote casting, transparency, and tamper resistance.
- Built a web-based voting interface integrated with **on-chain logic**, and validated the system design through a peer-reviewed publication in the *Journal of Cybersecurity and Privacy*.
- Addressed key system challenges such as **vote integrity, access control, and result verifiability** within a decentralized architecture.

n8n Automation

Personal Project

- Deployed a self-hosted **n8n** workflow automation platform on **Google Cloud** using **Docker** and **Ngrok**.
- Built and actively use **automated workflows** including Gmail classification/labeling and a Telegram-based expense tracking bot.

ShareMe

Personal Project

- Developed a **full-stack social application** enabling users to share, like, and comment on images, with authentication via **Google Identity** and content management using **Sanity CMS**.
- Deployed and hosted the application on **Netlify**, ensuring reliable access and performance.
