
SKILLS

Core Subjects: Data Structures & Algorithms, Operating Systems, Networking, Database Management
Languages: Swift, Objective-C, JavaScript, Go, Python
iOS & Systems: UIKit, SwiftUI, Cocoa, Realm, Endpoint Security, Concurrency, Debugging, XCTest
Backend & Cloud: REST API Design, SQL, Authentication, Middleware, Docker, Nginx, AWS, GCP

EXPERIENCE

Promobi Technologies Jun 2023 – Present
Product Engineer Pune, India

- **Scalefusion**

- Developed **macOS and iOS** clients to **monitor, secure, and manage** enterprise devices.
- Significantly reduced manual maintenance by architecting an **automated app update system** for **500+** macOS applications.
- Automated builds and reduced manual efforts by implementing **CI pipelines** for macOS and iOS projects and integrating **unit tests**.
- Achieved a **30%** reduction in codebase by refactoring shared logic using **Swift Generics** and modularizing into **SPM** libraries.

- **Veltar**

- Strengthened **device security** by developing an app and IO device control system using the **Endpoint Security Framework**.
- Improved visibility into **elevated admin session** by implementing a **real-time auditing** system.
- Enabled scalable and repeatable **compliance policy checks** by developing **Python scripts** for macOS.
- Enhanced **secure access** to enterprise domains by building **VPN and SWG** feature.

- **OneID**

- Enabled **secure, policy-based authentication** by designing a **custom macOS login window** with location, network, and time-based controls.
- Strengthened **privileged access security** by implementing a **local admin password solution** with automated password rotation and centralized visibility.

PROJECTS

Money Manager

- Engineered a full-stack **personal finance platform** enabling real-time expense tracking with a native iOS client and Go backend.
- Built a native **iOS app** with local data persistence and reliable **synchronization**, ensuring offline usage.
- Designed and deployed a backend server implementing **modular APIs**, middleware, and efficient data handling for reliable, **low-latency operations**.

EDUCATION

B.Tech (Computer Science) Symbiosis Institute of Technology, GPA: 7.64/10 2019-2023

PUBLICATION

Secure Voting Website Using Ethereum and Smart Contracts

- Researched and proposed a blockchain-based voting model to enhance the accessibility, security, and efficiency of the voting system.
