
SKILLS

Core Subjects: Data Structures and Algorithms, Operating Systems, Networking, Database Management
Languages: Swift, Objective-C, Python, JavaScript
Frameworks: UIKit, Cocoa, SwiftUI, Realm, Endpoint Security, REST API, Swift Data, Swift Testing
Developer Tools: Xcode, Git, JIRA, Agile Workflow, Postman, TestFlight

EXPERIENCE

Promobi Technologies

Product Engineer

Jun 2023 – Present

Pune, India

- **Scalefusion**

- Developed **macOS and iOS** clients for **Scalefusion**, a leading **MDM** solution enabling IT teams to **monitor, secure, and manage** enterprise devices.
- Built an app and IO device control system for **Veltar** using the **Endpoint Security (ES)** Framework to prevent unauthorized device access.
- Architected an **automated update system** to manage and deploy updates for **500+** macOS applications significantly reducing manual maintenance.
- Designed a **custom macOS login window** for **OneID**, enabling **secure authentication** via corporate credentials with location, network, and time-based **access controls**.
- Built **Python-based automation** to assess macOS and iOS security configurations against enterprise compliance baselines, and automated its execution across multiple macOS versions to reduce manual QA effort.
- Introduced **CI/CD pipelines** for macOS and iOS projects, improving build reliability, automated testing, and release velocity.
- Refactored and consolidated shared logic using **Swift Generics**, modularizing core components into Swift Package Manager (**SPM**) libraries, resulting in a **70%** reduction in codebase.
- Engineered a secure **remote terminal** access feature to connect to managed **macOS devices** using a custom **client-server architecture**.
- Implemented **real-time monitoring and auditing** of temporary admin privilege sessions, improving visibility into elevated access usage and reducing IT operational overhead.
- Implemented **GitLab CI pipelines** for macOS and iOS projects, incorporating **Swift unit tests** for modular components to improve build stability and code quality.
- Contributed to **VPN and content filtering** feature development for macOS and iOS to support secure enterprise access use cases.

PROJECTS

n8n Automation

Personal Project

- Deployed a self-hosted **n8n** workflow automation platform on **Google Cloud** using **Docker** and **Ngrok**.
- Built and actively use **automated workflows** including Gmail classification/labeling and a Telegram-based expense tracking bot.

EDUCATION

B.Tech (Computer Science) Symbiosis Institute of Technology, GPA: 7.64/10

2019-2023

PUBLICATION

Secure Voting Website Using Ethereum and Smart Contracts

- Researched and proposed a blockchain-based voting model to enhance the accessibility, security, and efficiency of the voting system.
